

Experiment Context

In this experiment, you are going to play the role of Ampara's CEO. Please answer all the questions with this role in mind, until otherwise instructed.

Meet Ampara

Ampara is a Lisbon-based company that provides technology-enabled elder care and home wellness services. You are leading a team of 107 professionals, including caregivers, nurses, digital health specialists, and developers. Your focus is on helping elderly individuals live safely and independently in their own homes.

The company combines personalized in-home support with a digital platform that allows clients and their families to monitor well-being, schedule visits, and receive real-time updates. Your services integrate technology with human care, ensuring that every client receives attention that is both reliable and empathetic. You offer:

In-Home Care Packages

- Daily living assistance (meals, hygiene, mobility support)
- Medication reminders and monitoring
- Emotional companionship services

Digital Wellness Check-Ins

- Remote visits via the Ampara app
- AI-driven health tracking (vital signs, routines, activity levels)
- Alerts for anomalies or sudden changes

Care Coordination Platform

- Possibility to schedule, track, and rate care sessions
- Secure communication between clients, caregivers, and health professionals

Community Programs

- Volunteer network for social visits
- Support groups for family caregivers

Ampara operates on a hybrid business model that combines subscription plans for ongoing home care management with pay-per-visit options for occasional support, complemented with a freemium digital platform offering premium telehealth and analytics features. You currently serve about 500 families in the Lisbon region, but plan to expand to other Portuguese cities. Your goals are to create 1,000 local caregiver jobs within three years, reduce hospital readmissions among elderly clients by 25%, and achieve a 95% satisfaction rate, promoting higher standards of home-based care.

Ampara's sustainability

As the CEO of Ampara, you decided to evaluate the company's sustainability by measuring its carbon emissions, that is, the amount of carbon generated by the company's operations. To do so, you will be using a Carbon Credits platform, CycleSix.

CycleSix helps companies calculate their carbon footprint and purchase certified carbon credits for offsetting their emissions. One carbon credit corresponds to one ton of carbon dioxide removed from or reduced in the atmosphere. Carbon credits are tradable certificates that represent emission reductions generated by projects such as renewable energy and reforestation. By buying carbon credits and/or reducing their emissions, companies such as yours may achieve a zero-emissions status.

You will now log into CycleSix and calculate Ampara's carbon footprint for October 2025, using the provided documentation about the company's operations. Please insert the information provided into the calculator to the best of your ability. If you are unsure of the right answer, please follow your best guess. You may use the computer's calculator to do any needed computations.

Please interact with the platform until you receive results from the calculator. Pay attention to the results, as we will ask you questions about them later.

Ampara – Carbon emissions information sheet

Ampara headcount

Role / Department	Headcount

Registered Nurses	10
Digital Health Specialists	4
Software Developers / Engineers	6
Product Managers	1
Customer Support & Scheduling	4
Sales & Partnerships	3
Marketing & Community Engagement	2
HR & Recruitment	1
Total	116

Information to consider:

- Workers are required to come to the office three times per week, except for Caregivers and Registered nurses. Caregivers and registered nurses come to the office once per month.
- Ampara offers breakfast and all-day coffee to all employees coming to the office. Breakfast includes milk, plant-based beverages, cereals and granola, fruit, yogurts, bread, croissants, jam, butter, and cheese. Bread is delivered daily from a local bakery situated 1km away from the office. About 95% of the workers eat breakfast at the office.
- Ampara has a digital-first policy, aiming to completely eliminate paper use in the office and by caregivers and nurses during client visits.
- Workers are strongly encouraged to use reusable bottles at the office, and Ampara does not provide single-use plastic kitchenware.
- On average, the Ampara office generates about 5kg of recyclable waste per day, of which about 2kg is glass, 1.5kg is plastic, and 0.5kg is paper. It also produces about 10kg of non-recyclable waste per day, which is sent to a landfill. A fraction of this non-recyclable waste is organic waste. Garbage is collected daily by a subcontracted company.
- Ampara's office distinguishes itself by having large windows that allow for ample natural light.
- Nurses and caregivers drive their own vehicles. On average, they drive 12km per day. They do not work on weekends and holidays. 80% of the nurses and caregivers drive diesel vehicles. Consider that, on average, nurses and caregivers use 1liter of fuel for every 15km.
- The October 2025 electricity bill for Ampara's office was 2,595kwh. This value includes energy for office heating and cooling, as well as for running kitchen appliances and all IT-related equipment.
- The October 2025 water bill for Ampara's office was 10,6 m3.
